WHAT IS TCHU ???

WHAT?

TCHU is a friendly, user focused web-app that attempts to make terminals easy and fun to learn.

This learning is achieved through assigned checklists for students, as well as sandbox environments for anyone and everyone.

WHO?

TCHU is designed with students and teachers in mind as a primary focus.

But, with that said, anyone can use this web-app to improve their terminal skills.

WHY?

When it comes to terminals, they can look scary, and initial setup can be difficult, but they're often the best method for interfacing with your machine.

As such, we wanted to make them a little less scary. With that thought in mind, TCHU was born.
